ABOUT COMPANY

At One Diksha, we believe in a new era of education—one that is practical, career-focused, and guarantees employment. We have designed a job-secured learning experience that doesn't just teach you to code but ensures you start your career in tech with confidence.

Tools covered

django

MySQL

Our Services

API Development

Application Programming Interfaces (APIs) connect the frontend and backend of applications, allowing them to communicate and share data.

Database Management

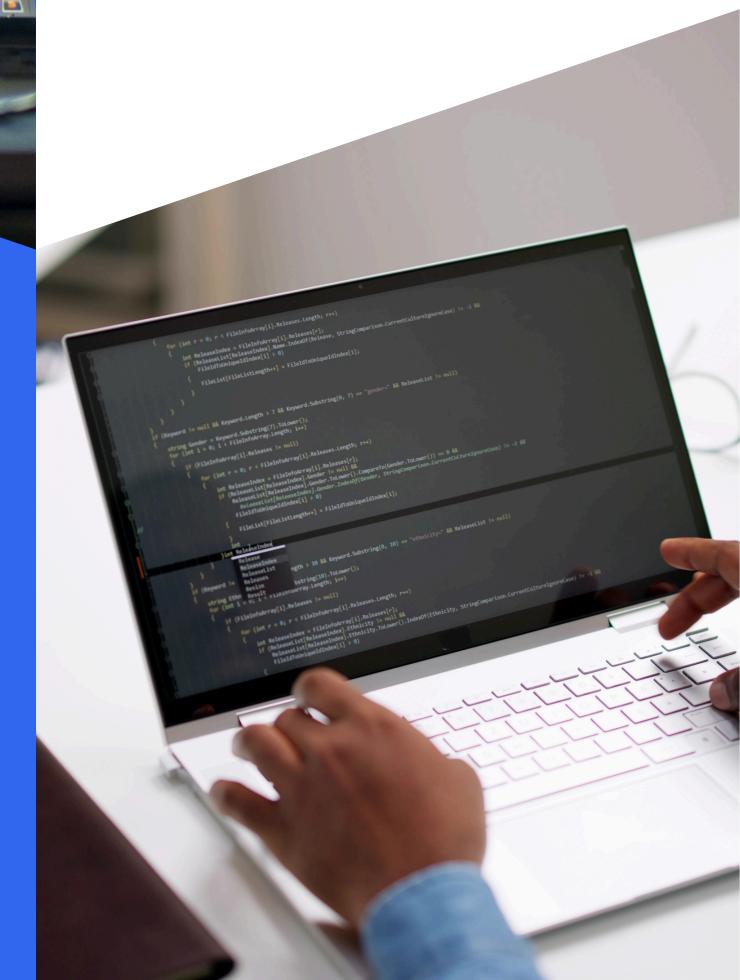

Databases are created, implemented, and maintained by backend engineers to effectively store and retrieve data.

Backend as a Service

Backend developers use Backend as a Service (BaaS) platforms to streamline infrastructure administration and speed up backend development services.

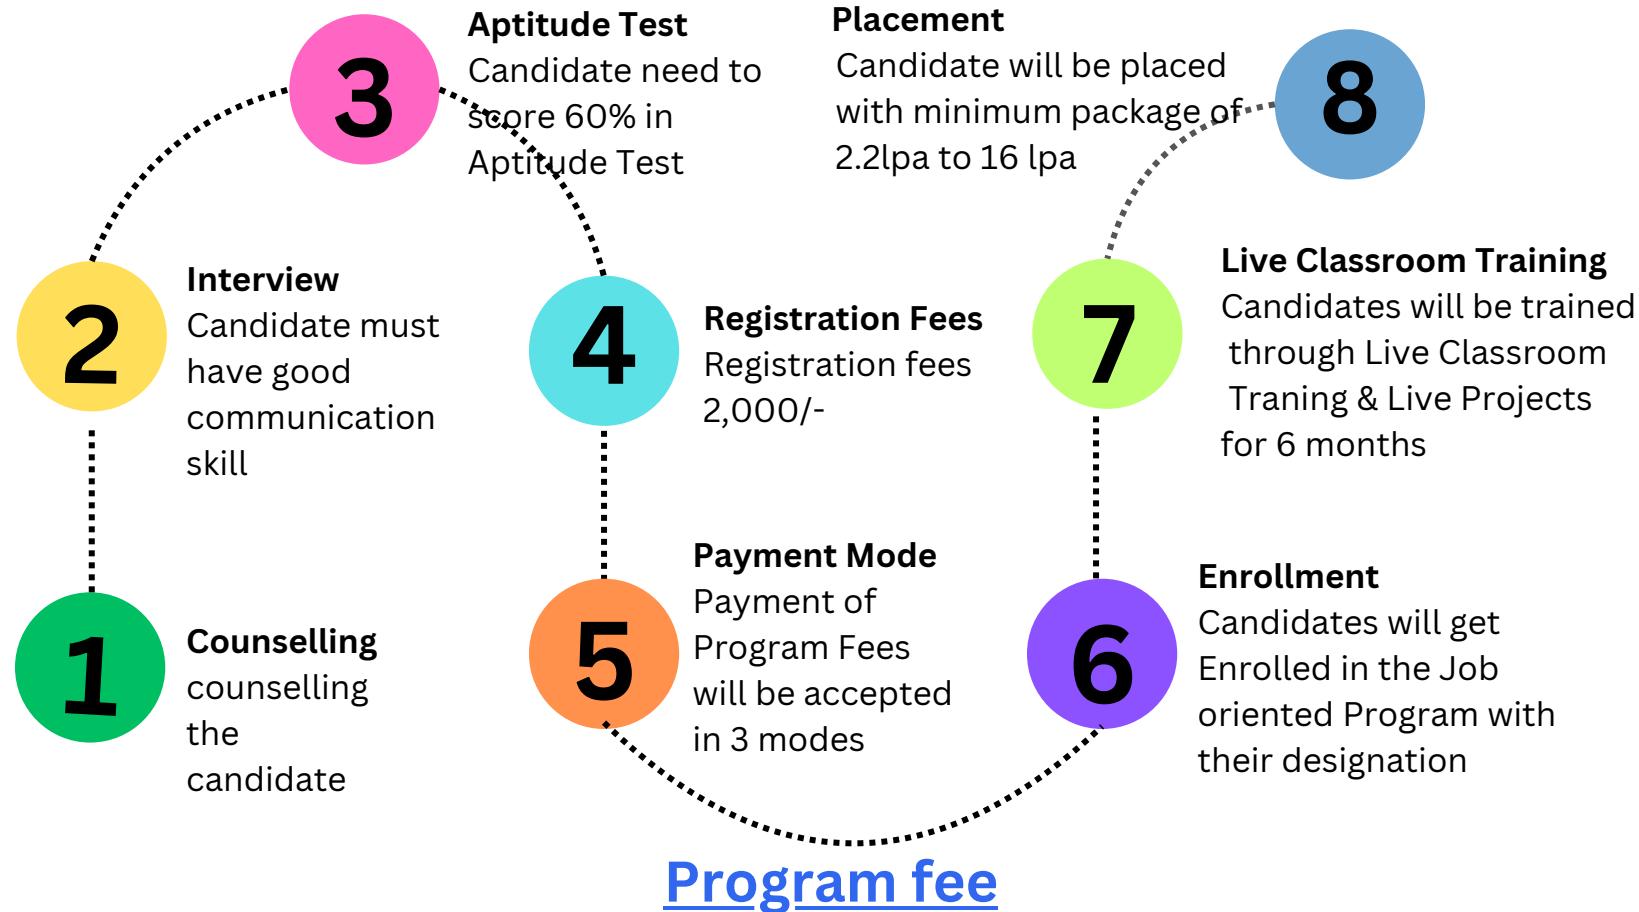

Our Vision & Mission

- Education guarantees employment - No more uncertainty, no more waiting, no more struggling with endless job applications.
- To build a global ecosystem where students, mentors, and hiring partners work together to drive innovation, skill development, and career success.
- To make tech education accessible, practical, and results-oriented.

Backend developer program

How to Enroll

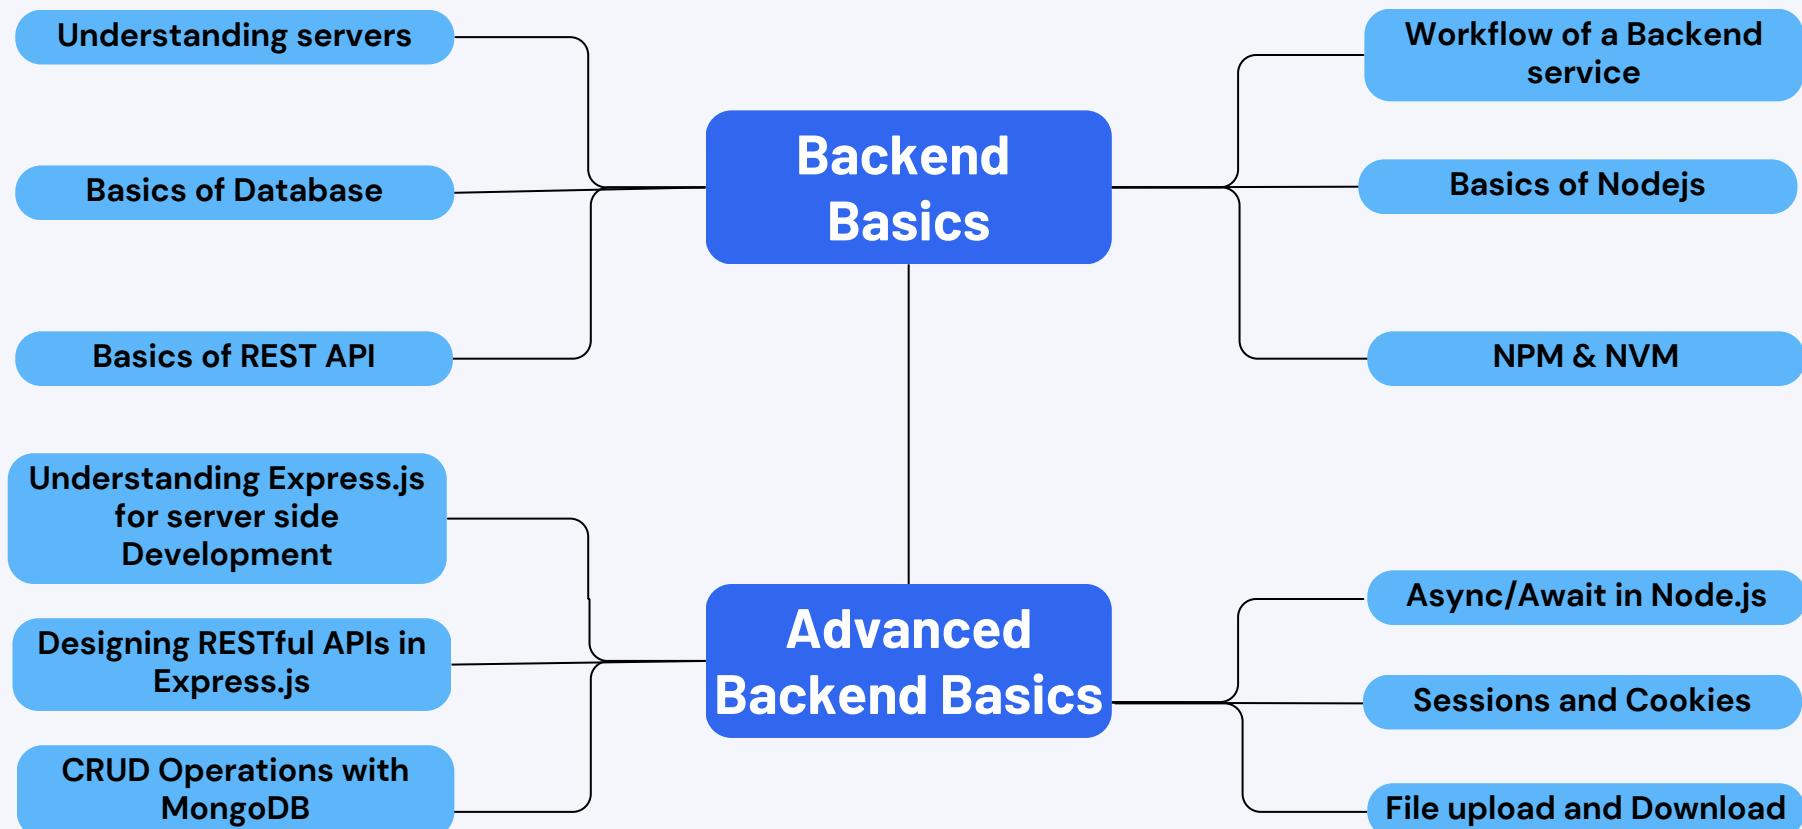

2,54151/- including all taxes

The program fees only pertains to training, tuition, boarding and lodging costs for the Live & campus training.

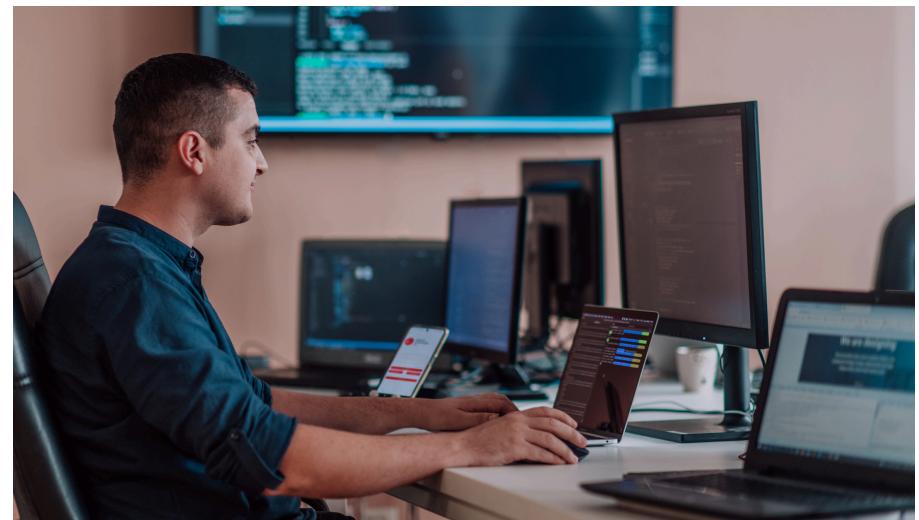

Backend developer Roadmap

Back-end development entails working on server-side software, which covers everything that isn't visible on a website. Back-end developers guarantee that the website runs smoothly by focusing on databases, back-end logic, application programming interfaces (APIs), architecture, and servers.
